Supervisor: Amara Auguste

Brief Introduction

My project is a video game that hopes to achieve a balance between entertainment and education. In my game, the player is looking at a traffic intersection from an outside perspective and must select the correct order in which the cars currently present will leave the intersection with various obstacles providing more depth to the problem depending on the difficulty they have chosen on the screen prior.

The reason why I decided to make a game loosely based on scenarios that may arise in the futures of drivers is because I hope to earn my driving license by the end of the year, and the research conducted will most certainly help me in that regard as well.

Tools Needed

Unity = The game engine; needed to create, test, and run the game (<https://unity.com/>)

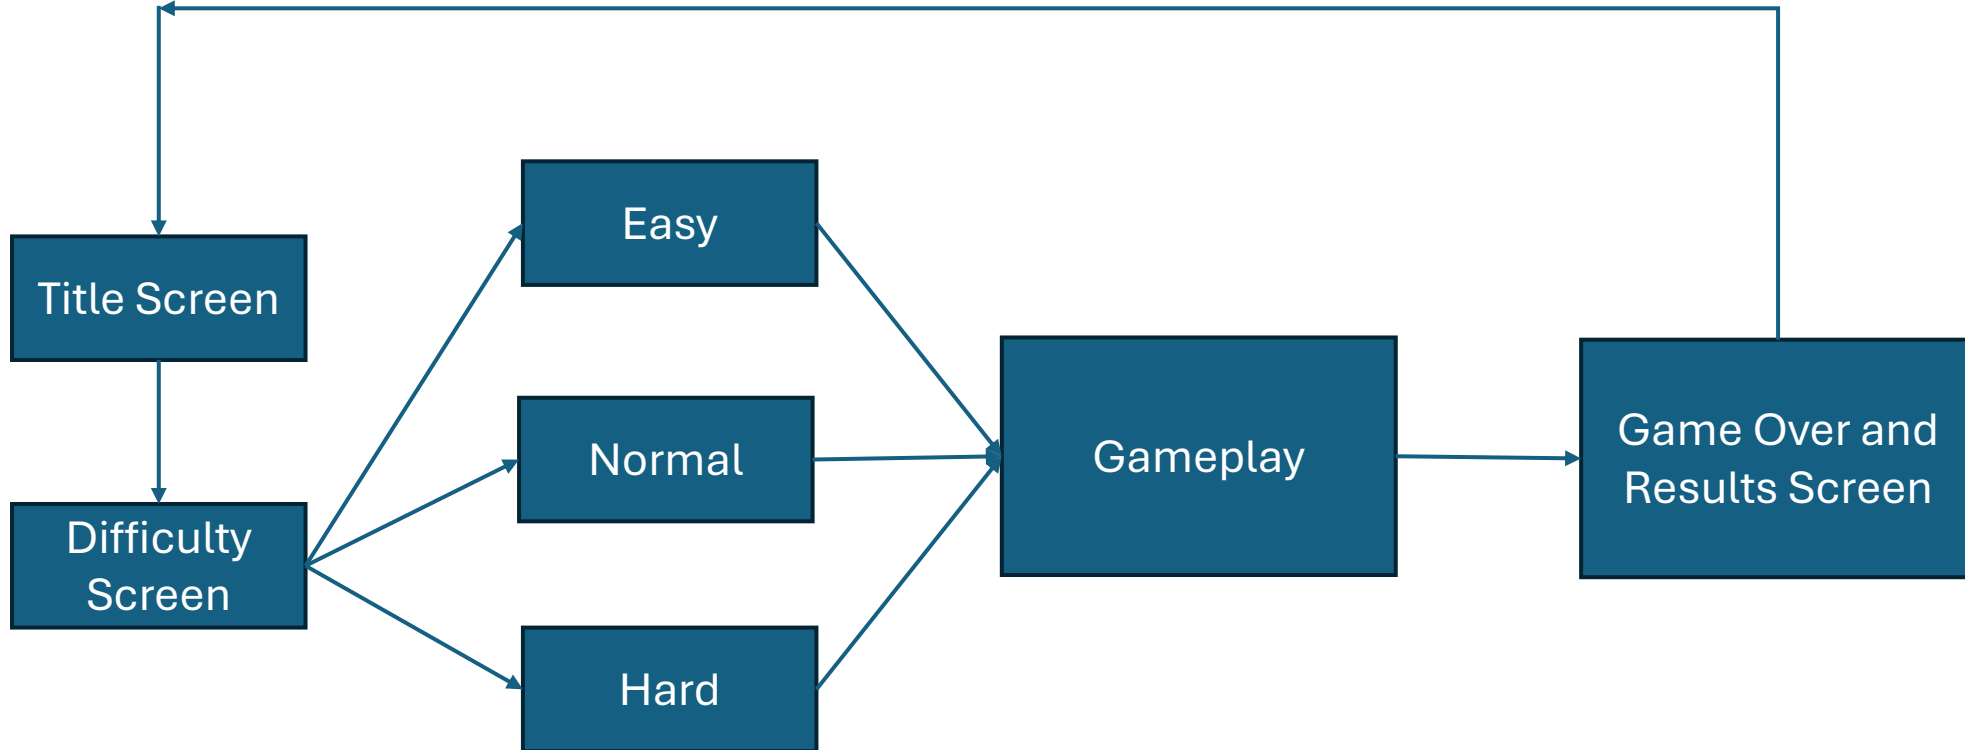

Github = Store code online and useful for keeping track of my project's progress over the semester (<https://github.com/PAULLIU17/Traffic-Intersection-Simulator>)

Official New York State Driver's Manual = Necessary for new drivers to take their first steps into the driving world and useful for veteran drivers to reinforce their knowledge (<https://dmv.ny.gov/new-york-state-drivers-manual-practice-tests>)

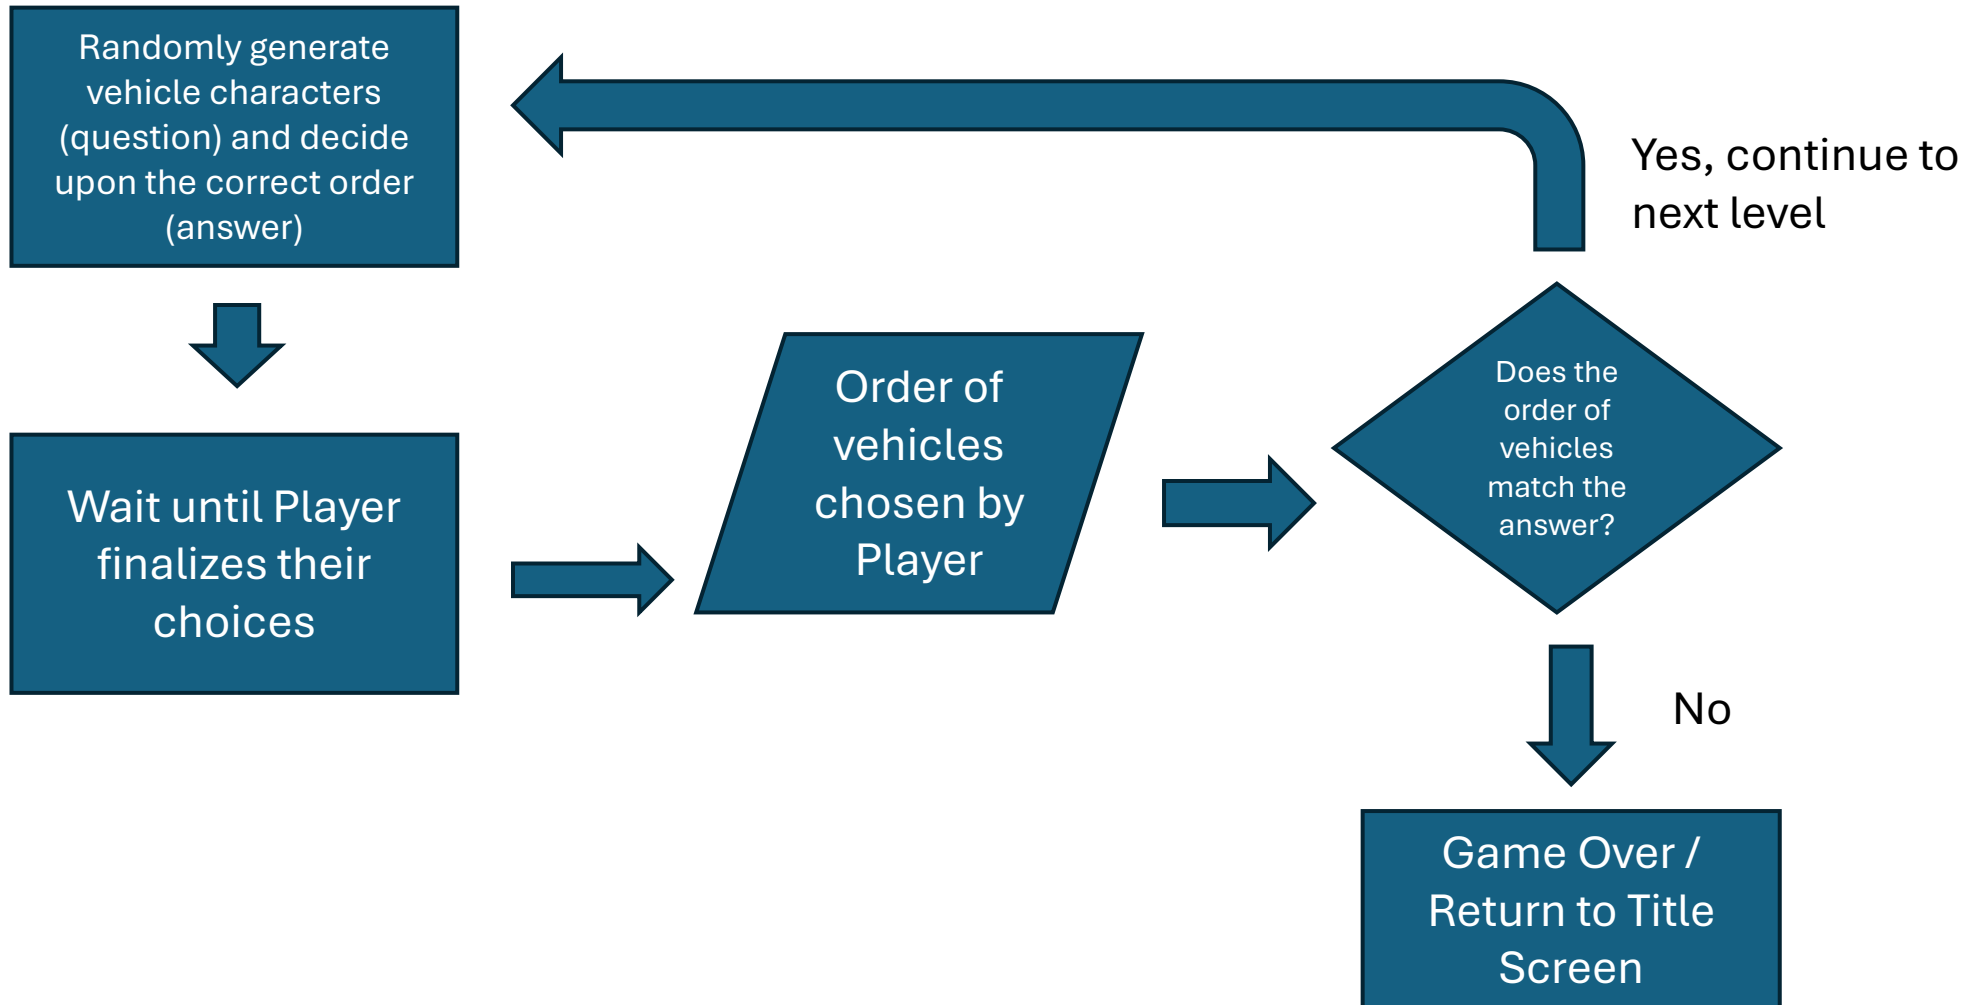

Examples of Uses

1. While on the commute to take your driving license test, you can't help but stress over some of the topics that will certainly be on the exam, including intersection navigation. Taking out your phone, you decide to brush up on your knowledge.
2. Laying down on your bed with nothing to do, you decided you want to play something that stimulates your brain.
3. After returning home from work after a long day, you can't help but replay an almost disastrous accident at a traffic intersection that resulted in the other driver cussing at you. Confused on if you were wrong and not wanting to go through something like that again, you decide to remind yourself of intersection rules.

Tentative Schedule

Weeks 4-9: Continue Working On The Project

Week 10: Update Slides (Full Draft)

Weeks 11-13: Finish The Project (MVP)

Weeks 14-15: Add More To The MVP

Week 16: Update Slides (Final Draft) & Record Final Video

One thing you are looking forward to and one thing you are dreading?

Testing my skills and finding out how much I am worth in the Game Development field.

The common clashes of scheduling from my other class and internship (that is unrelated to the project) might cause minor issues.
