
Thanks for filling out this form: Project Intake Survey

From Forms Response Receipts <forms-receipts-noreply@google.com>

Date Thu 9/3/2026 3:47 PM

To Paul Liu <Paul.Liu@cuny.edu>

* External Sender - Proceed Cautiously with Links and Attachments. *

Thanks for filling out this form: [Project Intake Survey](#).

You're receiving this email because you filled out the following form using your email address. **This form is owned by Brooklyn College.** Make sure you recognize and trust this form before copying or clicking on any links. If it looks suspicious, **report it**.

Here's what was received.

Project Intake Survey

This is a required Google Form for CISC 4900 (Fall 2026). Please consider using some of the prompts for assistance with fleshing out your project goals for the semester.

3 notes. **Please read.** We will assume you have read this.

(1) We cannot possibly account for every unique project through one standard survey, so answer the prompts using as much latitude and flexibility as possible - we will be able to follow along if you communicate it clearly.

(2) Share as many details as possible for each prompt, and in the cases where some details are to be figured out later, please indicate as such but also show us you have given it some serious thought, too. The more you include, the higher quality feedback we can provide.

(3) Lastly, look through some of the prompts based on the finer scope it is asking for, which may require some thinking in layers of abstractions - it helps us piece together the entire project this way.

(4) If you need to resubmit for any reason, please go ahead and do so. The most recent submission will be used for grading.

Thank you.

Paul.Liu@cuny.edu

Background Information

EMPLID # *

This is composed of 8 digits. This may also be known as a CUNYFirst ID #.

24016617

First Name *

Paul

Last Name *

Liu

What is your academic major (primary field of study)? *

☐ Computational Mathematics

☐ Computational Mathematics - Theoretical Mathematics

- ☒ Computer Science
- ☐ Information Systems
- ☐ Multimedia Computing
- ☐ Data Analytics
- ☐ Other:

What is your academic minor or dual-major (secondary field of study)? *

- ☐ Computer Science
- ☐ Data Science
- ☐ Multimedia Computing
- ☒ Not applicable; I am solely pursuing a major/primary field of study
- ☐ Other:

Which of the following software development techniques have you applied to a software project before, prior to enrolling in this class?

- ☐ User requirements gathering
- ☐ Product Thinking
- ☐ Usability
- ☐ Accessibility
- ☐ Code Review
- ☐ Testing and Quality Assurance

Project Metadata

What is the prevailing context of your project?

- ☐ Internship credit (internship) - participation in a formal agreement with a large organization with well-defined responsibilities,
- ☐ Internship credit (fellowship) - participation in a formal agreement with a program with defined training schedule.
- ☒ Supervised project (faculty or university research lab)
- ☐ Supervised project (small business owner)
- ☐ Supervised project (other) - participation in a project with a project supervisor
- ☐ Unsupervised project - I have no supervisor.
- ☐ Other:

What is the prevailing modality of this project? *

Simply completing training would not be appropriate. You are required to participate in hands-on application of concepts and maintain a GitHub repository.

- ☒ Creation - A personal side project that needs to be planned and built-out
- ☐ Modification - A personal side project you are refactoring and adding significant features to
- ☐ Acquisition - A pre-existing project of an organization/department that needs additional technical support
- ☐ Volunteering - Technical role and/or substantial technical tasks
- ☐ Internship - Technical role and/or substantial technical tasks
- ☐ Professional - Technical role and/or substantial technical tasks
- ☐ Fellowship / Residency - Technical role and/or substantial technical tasks

Does your project require you to sign a unilateral, bilateral, or multilateral non-disclosure agreement (NDA)? *

NDA's are broadly synonymous with: confidentiality agreements (CAs), proprietary information agreements (PIAs), or confidential disclosure agreements (CDAs).

- ☐ Yes

☒ No

As an approximation, do you believe your project is more challenging than any project you've completed for CISC 1115/CISC 1170 **and** CISC 3115 **and** CISC 3130?

*

This is an "unofficial" requirement of the course. That is, at the bare minimum, all projects for CISC 4900 should be beyond the demands and complexity of the mentioned courses.

- ☐ Strong no
- ☐ Not really
- ☐ Yes
- ☒ Strong yes

Which best describes the amount of members in your team? *

By members, we mean students currently taking CISC 4900 alongside you, from any of the sections.

- ☒ Solo
- ☐ Duo
- ☐ Trio
- ☐ Quad

Please input your group's team name. *

If you previously chose "Solo", put "Solo". However, if you chose "Duo" or "Trio" or "Quad", please put your team's unique group name that you've all come up with. You can change it later, but we just need it for filtering now. Naturally, make sure each member of your group puts down the same name.

Solo

Select the following **industry** that your project most closely belongs to. *

Academic ▼

Select the following **supersector** that your project most closely belongs to.

*

Automobiles and Parts ▼

Select the following **sector** that your project most closely belongs to.

*

Automobiles and Parts ▼

Select the following **subsector** that your project most closely belongs to.

*

Entertainment ▼

Select the following role or area of technology that your project is most closely related to. *

Game Design and Game Development ▼

Select the best-fit, general category of your particular project. *

Game ▼

Select the most suitable domain that your **PRIMARY** contributions to the project will belong to. *

Game - Logic and Implementation ▼

Select the most suitable domain that your **SECONDARY** contributions to the project will belong to. *

Game - Logic and Implementation ▼

Project Overview

Title *

Provide the name or title of your project. You can change it later, but we just need it for filtering now. Naturally, if you're in a group, make sure each member of your group puts down the same name.

Traffic Intersection Simulation/Simulator (TIS)

Tagline *

Here are two examples. **Example #1:** The tagline for Kodak is "Share moments. Share life." **Example #2:** The tagline for FedEx is "The World On Time."

Never stop moving. Never stop learning.

Mission Statement *

Here are two examples. **Example #1:** For Google, this is: "To organize the world's information and make it universally accessible and useful." **Example #2:** For Tesla, this is: "To accelerate the world's transition to sustainable energy" or "To accelerate the advent of sustainable transport and electric technology." This concept is also known as: "corporate purpose or slogan or motto."

To entertain and test user's driving knowledge.

Vision Statement *

Here are two examples. **Example #1:** For Google, this is: "To provide access to the world's information in one click." **Example #2:** For Tesla, this is: "To create the most compelling electric car company of the 21st century."

To prevent traffic jams and accidents.

Core Project Details

Please form clear, concise, and coherent responses. Each prompt is very particular and scoped. One of the **most important** sections in this entire Google Form. Spend quite a deal of time on this section. The descriptions are ultimately there to help you, albeit a bit verbose.

State and elaborate who your **end-user** is. *

This is the person who would be receiving the most interaction and/or first-hand value from your project. You could also consider this as the "customer profile" or "consumer profile".

Highschool/College students without driving licenses.

State and elaborate on the **problem-space** involved in your project. *

Provide specific details about something you are trying to improve upon, re-imagine, and/or solve. This should be both deliberate and detailed. Isolate and pinpoint **just the targeted problem**, nothing more, nothing less. This narrows in your focus on what exactly the problem is and excludes what the problem is not.

Many driving games revolve around high-speed racing and driving in isolated environments against other players for entertainment, but rarely on the, admittedly, more mundane aspects we see in real life.

State and elaborate on the **search-space** involved in your project. *

Provide specific details about the possible and/or neighboring solutions that could be suitable for the problem you are trying to solve. This should be both deliberate and detailed. Isolate and pinpoint **just the possibilities**, nothing more, nothing less. This narrows in your focus on where exactly to look and excludes where not to look in order to solve your problem.

Games simulating more applicable driving scenarios such as entering/exiting highways, parking, etc.

State and elaborate on the **solution-space**. *

Provide specific details about the particular solution you've decided to pursue. This should be both deliberate and detailed. Isolate and pinpoint **just the solution itself**, nothing more, nothing less. This narrows in your focus solely and exactly on the **broad mechanism** that will be solving the problem. This is the conceptual, abstract, logical, **implementation-agnostic** solution.

A non-engineer can answer this prompt, but they wouldn't be able to answer the next prompt, because anyone can come up with a solution, but not everyone knows the implementation of it. Your answer to this prompt should signal to the instructors that we follow the direction you are heading.

A game simulating multiple cars approaching an intersection.

State and elaborate on the **implementation-space, the key action steps**. What are the exact or assumed implementation details of your solution? *

This is the most complex prompt.

Let's say your solution-space was a program that swiftly builds conflict-free schedules for a sports team to have timely practices in order to (value-add, by the way) improve work/life balance and free up bandwidth that was manually spent on those logistics.

This prompt, for that case, would go into exact technical detail about **how** you will read in the data, parse through the data, store the data, write based on the data, and export the data. **Include more detailed specifics than that, though.** Will a "round-robin" algorithm be deployed? Will you be utilizing a "stochastic optimization" or a "coordinate descent" or a "gradient descent"? Will the steps be identical to something like "Sudoku" or "N-Queens?" and, if so, then how exactly? Be precise and accurate.

Your answer to this prompt should signal to instructors that you will very clearly be able to achieve the solution and, based on your due diligence, that it's just a matter of time, trial, error, and critical thinking.

Randomly generate "characters" (vehicles) with innate variables that will be visible to the player, wait for the player to select the characters in the order in which they believe will break the intersection deadlock, animate/simulate their selected order, and provide feedback afterwards.

State and elaborate on the **implementation-space, its executable form**. How exactly will the end-user be able to execute your solution? *

This is important because sometimes a problem-solver can become fixated on an abstract problem to the extent that an abstract solution is successfully produced, but the end-user is somehow overlooked, left lost without clear instructions nor instructions at all. Additionally, this is important to distinguish because the very same solution could possibly be implemented in different forms. **So, what are the concrete and specific implementation form of the solution?** Will the implementation of your solution be something a user has to download from GitHub and run locally? Will it be a Google Chrome Extension the user has to download and enable because the problem is native to the browser? Will it be a CLI script that the user has to copy & paste along with an accompanying walkthrough and simplified documentation to follow?

A web browser with a mobile app is the most likely solution.

Very briefly explain the value-add of your project. *

What exact value does the end-user receive through this project? Think thoughtfully about how your stakeholder(s) improves or has a different end-user experience now that your project exists. Communicate that.

They can entertain themselves and reinforce their knowledge of intersections and turns while on the go.

Will your project directly impact an existing business / organization?

If yes, please write the name of the organization (i.e. the name of the organization of your internship, research lab, or fellowship program). Otherwise write n/a

n/a

Supplementary Project Details

Some of these prompts are a bit long-winded. Please bear with it. Thank you. It may also be used for brainstorming assistance.

Which of the following best describes your project idea? *

Thank you for your patience and understanding on this problem prompt in particular. I (AJSL) couldn't come up with a better way at this time.

- ☐ It is a "clone" of a project that would be interesting to build from the ground-up, and will not be sourced from a tutorial (IE: so, building out "Wordle" after the week it became public, etc)
- ☐ It is a novel or niche project that will be highly specific to the problem being solved; significantly curated with a high affinity to the operating context and therefore mostly not reusable
- ☐ It is a project that is very similar to a pre-existing project sans bloatware, visual clutter, advertisements, paywall (etc)
- ☐ It is a project that will add multiple, intuitive, modern-day standard features that are painfully missing or only available with a paid plan (such as but not limited to: being able to export student test scores out of HackerRank into a CSV file)
- ☐ It is a project that will noticeably improve upon, either in terms of speed or scale or accessibility, a particular pre-existing feature or feature-set, likely by means of a better-

suited algorithm or programming technique/paradigm

- ☐ It is a project that will incorporate only the best parts of similar applications and leave out the ineffective or unnecessary parts
- ☐ It is a project that is seasonable, meaning that its impact or value might be high but its continuance might be low, such as but not only: a COVID-19 Global Data Tracker or a COVID-19 digital reader solution for entering campus)
- ☐ It is a project that is useful to build now because the prevailing mainstream application is set to be no longer supported (example: an online gaming database full of players' stats and game stats is ceasing production, so you set up everything to import that data, to archive it and add functionality, too OR if a social media provider is closing soon and the project finds a way to export all of the user's photo albums, notes, etc)
- ☐ It is a simple project in technical demands, but it is guaranteed to significantly help a real and sizeable userbase (such as but not limited to: creating a web app for the Career Center job fair, that will actually be used by the students who are attending, the staff who is facilitating, and the employers who are attending)
- ☐ It is a project that re-imagines or re-purposes a no longer existing service (IE: Yik Yak prior to it relaunching in 2021 or pre-bought-out MySpace)
- ☐ It is a project that allows for a pre-existing vendor locked-in app to be used on a different client (IE: an App that only exists for iOS and building it for Android, or vice-versa)
- ☐ It is an open-source project on GitHub and I am working somewhat closely with the maintainers
- ☐ It is a proof-of-principle project, such as working with robotics or drones or hardware (rasberry pi, arduino, etc) in general programmatically
- ☒ It is project work with and for a professor
- ☐ It is my day-to-day volunteer, internship, or professional technical work, and it isn't one project but a series of tasks and sprints
- ☐ It is my day-to-day volunteer, internship, or professional technical work, and it is one project

Provide the name(s) of an organization or application that is most fit to be a **direct competitor** to your project or project idea. *

Traffix: Traffic Simulator

Provide the name(s) of an organization or application that is most fit to be an **indirect competitor** to your project or project idea. *

Traffix: Traffic Simulator

Provide the name(s) of an organization or application that is most fit to be a **replacement competitor** to your project or project idea. *

Traffix: Traffic Simulator

Will your project **actually** have and/or support **live** (registered, active, and non-manufactured) users and deal with **live** traffic from those users? *

The aforementioned userbase should **exclude**: the mock data users in the userbase, scripted bots acting upon the project, and the team that is working on the project.

☐ Yes

☒ No

Project Technical Details

List all of the **programming languages** that your project will involve. *

Input "N/A" if this does not apply to your project.

C#

List all of the **frameworks** that your project will involve. *

Input "N/A" if this does not apply to your project.

Unity

List all of the **tools/technologies** that your project will involve. *

Input "N/A" if this does not apply to your project.

N/A

In terms of technical knowledge and technical ability, where do you stand with the technical requirements of your project?

- ☒ Overall, I am a beginner with the technical requirements, most of the technologies I will be using will be completely new to me, but I will learn how to use them as I go
- ☐ Overall, I am at an intermediate level with the above
- ☐ Overall, I am proficient with the above and am certain I can meet the technical requirements
- ☐ Overall, I am advanced with the above and am certain I can meet and possibly exceed the technical requirements

Where will you store your data? *

Input "N/A" if this does not apply to your project.

Github

Which external APIs will you be using? *

Input "N/A" if this does not apply to your project.

N/A

You will be required to use a code repository platform such as GitHub, Bitbucket, or GitLab. Have you used any of these before? *

- ☒ Yes, GitHub
- ☐ Yes, Bitbucket

☐ Yes, GitLab

☐ No

☐ Other:

Please include a link to your project repository below. *

Maintaining a project repository is required for the class. Please either change your project repository settings to publicly visible or add your instructor @katychuang as a collaborator. If you're in a group, make sure each member of your group puts down the same url.

<https://github.com/PAULLIU17/Traffic-Intersection-Simulator>

You will be required to use some method to track your project tasks, such as a text file in your project repository or project management software. *

If you plan on using a project management software that is not listed in the question, please input it in the last option.

☐ Yes, GitHub Project

☐ Yes, Trello

☒ Yes, a text file in my project repository

☐ No

☐ Other:

Please include a link to your project tracker below. *

Maintaining a project board is required for the class. Please make your project board publicly visible or add your instructor to be able to view your board. If you're in a group, make sure each member of your group puts down the same url.

n/a

Will you be using an application hosting service such as Firebase, Heroku, Netlify, or Vercel? *

If you plan on using an application hosting/deployment service/approach that is not listed in the question, please input it in the last option.

☐ Yes

☐ No

☒ Other: unsure

If you answered "yes" to the previous prompt, please include a link to it below. *

Input "N/A" if this does not apply to your project.

N/A

Very briefly describe the most complex aspect, in your opinion, of the project. *

Learning how to use C# for Unity.

Very briefly describe a particular technical part of the project that you are most looking forward to contributing toward. *

Generating an appropriate amount of characters/NPCs based on the difficulty chosen by the player.

Product and Project Management

For any explanations, please be brief. Spend quite a lot of time on this one, we're looking for high-quality responses, especially as it pertains to the stages of project development.

What is the full name of your supervisor? *

This would be the person the instructor could reach out to for supervisor evaluation feedback.

Amara Auguste

What is the email address of your supervisor? *

Amara.Auguste@brooklyn.cuny.edu

What title does your supervisor hold? *

Brooklyn College Professor

What organization does your supervisor work for? *

CUNY-Brooklyn College

Provide a link to your supervisor's LinkedIn profile. *

Put N/A if you will not be inputting the aforementioned link.

<https://www.linkedin.com/in/amara-auguste-b0581a143>

Provide a link to a public-facing portfolio of your supervisor or a link to a public-facing biography of your supervisor. *

Put N/A if you will not be inputting the aforementioned link. Submissions with "N/A" supplied to the previous prompt and/or this prompt will be subject to further inspection as it indicates no signal of a valid supervisor.

<https://www.linkedin.com/in/amara-auguste-b0581a143>

In total, how many members (including yourself) compose the core working group for the project? *

☒ 1

☐ 2

☐ 3

For this project, are you an Individual Contributor (IC) or the Team Lead? *

- ☒ Individual Contributor
- ☐ Team Lead
- ☐ My project involves 2 people in total and it will be co-led

Explain your projected **Proof of Concept (PoC)**. *

We ask that you provide a clear, concise, and coherent response. Make sure every word is of-value. This information is of major significance to the instructors of the course. For those with internships, this refers to approximately weeks 1-3 of the semester.

Power point/slides detailing the structure of the project.

Explain your projected **Prototype**. *

We ask that you provide a clear, concise, and coherent response. Make sure every word is of-value. This information is of major significance to the instructors of the course. For those with internships, this refers to approximately weeks 4-6 of the semester.

Project has a scene with multiple characters/props placed on it.

Explain your projected **Pilot**. *

We ask that you provide a clear, concise, and coherent response. Make sure every word is of-value. This information is of major significance to the instructors of the course. For those with internships, this refers to approximately weeks 7-9 of the semester.

Project's characters can be interacted with via clicking from the player and respond accordingly. Pathing may not initially work correctly but that will eventually be fixed.

Explain your projected **Minimum Viable Product (MVP)**. *

We ask that you provide a clear, concise, and coherent response. Make sure every word is of-value. This information is of major significance to the instructors of the course. For those with internships, this refers to approximately weeks 10-12 of the semester.

Project has a minimum of one scene that functions properly without any issues/bugs.

Explain your projected **Minimum Delightful Product (MDP)**. *

We ask that you provide a clear, concise, and coherent response. Make sure every word is of-value. This information is of major significance to the instructors of the course. For those with internships, this refers to weeks 13-16.

Project has three functional scenes, one for each difficulty (easy, normal, hard) as chosen by the player on the title screen.

Constraints and Technical Debt

Six Constraints In Project Management

Captionless Image

For the constraint of **scope**, which of the following best describes your project's **scope**? *

See above image.

- ☐ We will likely have to downscope
- ☒ It is appropriately scoped and we will be mindful of scope creep along the way
- ☐ We will likely have to upscope

For the constraint of **cost**, which of the following best describes your project's **cost**? *

See above image.

- ☒ It is free to produce and/or contribute to
- ☐ The project will require some financial costs
- ☐ It is expensive to produce and/or contribute to

For the constraint of **time**, choose the option that is simultaneously the most likely to occur and the one you are most concerned about. *

See above image.

- ☒ Being able to average 15 hours or more of project work per week (will likely do less)
- ☐ Being able to average 15 hours or more of project work per week (will likely do more)
- ☐ Little time allocated to planning and strategy
- ☐ Coordinating a calendar around the project that works for me and/or me and my team
- ☐ Extending internal, self-set deadlines on the project calendar for being unable to meet them in time
- ☐ Little time allocated to execution of plan/strategy

For the constraint of **resources**: do you consider that you have or will have the proper amount of people, the necessary equipment/materials, requisite level of access to particular facilities, and access to the necessary software/hardware to productively contribute to the project? *

If you are not selecting "Yes", then please identify and explain which particular resource is scarce and/or a blocker for you.

- ☒ Yes
- ☐ Other:

For the constraint of **quality**, which phenomenon below is most concerning to you in regards to your project? *

See above image.

- ☒ Lack of communication and/or miscommunication
- ☐ Suboptimal design and/or development knowledge
- ☐ Suboptimal design and/or development skills
- ☐ Too many project changes (within team)

For the constraint of **risks**, of risks that you anticipate encountering, please select **all** that apply.

*

See above image.

- ☐ Stretched resources
- ☐ Operational mishaps
- ☒ Low performance
- ☐ Lack of clarity (within team)
- ☐ Scope creep
- ☐ High costs
- ☒ Time crunch

Use this prompt to explain in detail an important aspect of your project that was not covered by the survey. *

We cannot possibly capture everyone's unique project details in one uniform survey. Please use this prompt to add any and all details that you feel is necessary to communicate about your project. For those that felt the survey did not accurately capture most of their project, this prompt is most important for you to fill out thoroughly, and the instructors will prioritize reading this prompt if so. For those who still have more details to share, this is also important for you, too. Otherwise, please put "N/A".

N/A

Closing Section

This is serious business.

Academic dishonesty is prohibited in The City University of New York. Penalties for academic dishonesty include academic sanctions, such as failing or otherwise reduced grades, and/or disciplinary sanctions, including suspension or expulsion. I agree and acknowledge that I will abide by The CUNY Academic Integrity Policy. *

<http://www.cuny.edu/about/administration/offices/legal-affairs/policies-resources/academic-integrity-policy/>

I agree and acknowledge this.

The supermajority or entirety of the hands-on, project-building work I will produce will be of my own original work. Any ideas, resources, or project assets derived from external sources will be appropriately credited and cited. Failure to do so will result in a close evaluation of the work produced against The CUNY Academic Integrity Policy. *

I agree and acknowledge this.

Today's Date. *

The month, day, and year of TODAY.

MM DD YYYY

09 / 03 / 2026

Indication Of Completion. *

You have reviewed the Google Form in its entirety, provided your full name and CUNY ID#, listed today's date, and are ready to submit the form. Everything you have shared in this form is, to the best of your knowledge and belief, correct, accurate, and truthful. If so, please select the option "Submitted" in the dropdown menu for this prompt.

Submitted.
